{gallery}fantasy:::0:0{/gallery}

FANTASY is a column system which is made of 28 mm tubes and can be wall-mounted. Per each pillar there are two perforated tubes that make the system's elements arrayable. The system has two column types: the front and rear perforated. A laminated decorative stripe placed between two tubes makes this system so unique. FANTASY is an elegant and very effective equipment. Several accessories can be hanged on it, and their height can be set per 50 mm. The two pillars are 2400 mm long, it can only be ordered in [powder coated \(RAL\)](#) version, but you can chose the colour of the decorative stripe. With proper preparation it can be mounted on drywall.
